Unit 1

1. Introduction to AI

Module 1.7

1.7 AI as a Service (AIaaS)

Tutorial 1.7

1.7 AI as a Service (AIaaS)

AI as a Service (AIaaS)

- AIaaS stands for Artificial Intelligence as a Service.
- It is a cloud-based delivery model to offer AI tools to businesses without building or maintaining their own infrastructure.
- It is like renting AI tools instead of setting up the whole infrastructure yourself.
- How AIaaS Works
  - Providers like OpenAI, AWS, Microsoft Azure, and Google Cloud host AI services on scalable cloud platforms.
  - Users tap into pre-trained models, APIs, and frameworks for tasks like:
    - Natural language processing
    - Image and speech recognition
    - Predictive analytics
    - Chatbots and recommendation engines
- Some platforms also allow custom model training using your own data without managing the backend.

Why AIaaS is Popular?

- Cost-effective
  - No need to hire data scientists or build expensive infrastructure.
- Fast deployment
  - Plug-and-play AI features can be added to apps quickly.
- Scalable
  - Pay-as-you-go pricing lets businesses adjust usage as needed.
- Accessible
  - Even small startups can use advanced AI tools.

Real-World Use Cases of AIaaS

- Healthcare
  - Medical image analysis
  - Disease prediction
- Retail
  - Personalized recommendations
  - Customer segmentation
- Finance
  - Fraud detection
  - Credit scoring
- HR
  - Resume screening
  - Candidate matching

THANK YOU!!!
