Unit 1

1. Introduction to AI

Module 1.8

1.8 Pre-Trained Models

Tutorial 1.8.2

1.8.2 Transfer Learning

AI-1.8.1 K2 Explain the use of pre-trained AI models and the risks associated with them.

Transfer Learning

- Transfer learning is a technique where pre-trained model is repurposed to solve new and often more specific tasks.
- The effectiveness of this approach largely depends on the similarity between the function performed by the original model and the function required by the new model.
- For example, modifying an image classifier that identifies cat species to then identify dog breeds would be far more effective than modifying it to identify people’s accents.
- Few benefits of transfer learning:
  - Faster training of re-purposed model
  - Cost-efficient
  - Less data requirement

THANK YOU!!!
